Dear Parents,

The Year 8 students are holding their annual Science Fair on Wednesday evening October 19th from 5.00-6.45pm in the Science Building. Students from Year 7 and 8 have been making their own inventions and products which will be showcased on the night as a Mini Maker Fair.

Students have been working on many different science experiments. The experiments cover the chemical and physical aspects of science. You can expect to see explosions, metal flame testing and sports analysis!! There will be coke and mentos fountains, holograms and taste tests to name a few. Prepare to be dazzled! Some experiments are hands on, while others are demonstrations. This is a good chance to see what the students have been learning, as well as learn a few things yourself!!

The fair is open to all interested visitors. Please feel free to bring along grandma and grandpa and any other family who may wish to join in. You will be encouraged to question all students about their creations, experiments, findings and results. It should be an exciting and entertaining night!

The students will need to be there for 4.45pm in order to set up and visitors will be allowed entry at 5pm.

Please return the following note by: Wednesday 5th October 2015

Thank You,

Alison Ryan                     Sophie Jean
